## TECHNICAL PUBLICATIONS

PNR manufactures a complete range of spray nozzles for industrial applications, as well as products and systems specially designed for specific industries. Information about our Company and our product range is available through the following publications

PRODUCT RANGE	CTG TV11
GENERAL PURPOSE SPRAY NOZZLES	CTG UG18
AIR ASSISTED ATOMIZERS	CTG AZ18
COMPLEMENTARY PRODUCTS AND ASSEMBLY FITTINGS	CTG AC18
INDUSTRIAL TANK WASHING SYSTEMS	CTG LS15
EVAPORATIVE COOLING LANCES	CTG LN16
FIRE FIGHTING PRODUCTS	CTG FF10
PAPERMILL PRODUCTS	CTG PM10
STEELWORK NOZZLES	CTG SW11
SPRAYDRY NOZZLES	CTG SP10

As a result of continuous product improvement, our documentation is regularly updated and mailed to customers whose name and address are registered into our catalogue Mailing List. We shall gladly register your name, if you mail to the nearest PNR office or Distributor the form on page 33, duly completed with the required information.

## NOTES

NOTES

Our products and their performances are continuously reconsidered and modified to keep up with the latest state of technology. We regret not to be able to give our customers previous advice about these modifications: data and product specifications given in this catalogue are always to be understood as indicative, and do not firmly engage our Company. Should your application imperatively require one or more characteristics of one of our products, as given by this catalogue, to be strictly adhered to, we ask you to obtain a written confirmation before ordering. All information contained into this catalogue, including product data, product codes, diagrams and photographs are the exclusive property of Flowtech Srl. It is forbidden to reproduce any part of this catalogue without having obtained a permission in writing.

Dimensions in this catalogue are given in millimeters (mm).

All threads manufactured according to the ISO 228 standards except where indicated. (European norms BS 2779 - DIN 259 - UNI 338).

Explanations about the abbreviations used in the catalogue and warranty conditions are given on page 33.

All Trademarks mentioned in this catalogue are the property of their respective owners.

Our Company has qualified its Quality Management System according to the ISO 9001/2000 Norms.

**DNV**  
Cert. 04111-99-AQ  
MIL SINCERT

## COMPLEMENTARY PRODUCTS

The majority of industrial processes based on the spraying of liquids require a large variety of supplementary operations such as drying by means of compressed air, mixing of fluids with Venturi eductors, heating or filtering of the liquid to be sprayed.

Our experience in the field of fluid dynamics and the continuous cooperation with a large number of customers on the major worldwide markets, enables us to propose a range of equipment which has not only been tested through many years of successful applications, but is continuously updated to the most modern technical levels and to the specific needs of modern industrial processes.

## ASSEMBLY ACCESSORIES

The choice of the most suitable nozzle or atomizer is not the final task for the designer of a plant. Requirements such as the ease of assembling, the correct nozzle orientation, the ease of maintenance, and choosing those accessories designed to optimize the total efficiency of the plant process. Our experience, built up studying thousands of professional applications where a correct fitting has shown remarkable results, enables us to offer a range of high quality accessories. If the problem is contending with a previously specified fitting, which is not ideal, a system that needs protection against clogging, or other associated product problems that a designer has to face during the commissioning of a plant, you will find within the PNR range of accessories many suitable and professional solutions: these have been developed working together for many years together with companies like yourselves.

## PNR MATERIALS CODES

Many of the products shown in this catalogue are available in different materials, and therefore their identification code in the Catalog is not complete. The two last digits in the code are used to specify the material, and these are left undetermined as XX.

When the required material has been selected complete the product code by adding the final digits. These should be read in conjunction with the corresponding materials available that are shown on the specific product page. If a special material, other than specified on our product data, is required please consult our sales staff.

The coding for the most popular materials are listed below.

A1	Mild steel	D3	Polyamide ( PA )	L1	Monel 400
A8	Zinc coated steel	D5	Talcum filled Polypropylene	L2	Incolloy 825
A9	Nickel coated steel	D6	PP, 25% glassfibers	L61	Hastelloy C22
B1	AISI 303 stainless steel	D7	High density polyethylene	L8	Hastelloy C276
B2	AISI 304 stainless steel	D8	Polyvinylidene fluoride (PVDF)	P6	Acrylic but. styrene (ABS)
B21	AISI 304 L Stainless steel	E0	EPDM	T1	Brass
B3	AISI 316 Stainless steel	E1	Polytetrafluorethylene (PTFE)	T2	Brass, chrome plated
B31	AISI 316 L Stainless steel	E2	PTFE, 25% glassfibers	T3	Copper
B8	AISI 309 Stainless steel	E31	Acetalic resin (POM)/Delrin	T5	Bronze
C2	Aisi 416 Stainless steel, hardened	E7	Viton	T8	Brass, nickel plated
D1	Polyvinylchloride (PVC)	E8	Synthetic rubber (NBR)	T81	Brass, electroless nickel plated
D2	Polypropylene (PP)	G1	Cast iron	V1	Aluminum
D21	Moulded polypropylene	H1	Titanium Grade 2	V7	Aluminum, ENP

## COMPLEMENTARY PRODUCTS

### AIR BLOWERS

In many industrial processes some products have to be cleaned, dried, wiped-off, de-dusted, cooled or simply displaced to the other side of a conveyor. Compressed air is often used to perform such steps but it is relatively expensive and creates excessive noise in most operations. Recent developments in flow dynamics offer a reduction in air consumption and noise level, while increasing the process efficiency. This is done by means of air nozzles with a streamlined outside surface, which allows a small jet of high pressure air to entrain a larger volume of surrounding air. The resulting air stream has a lower velocity with a high mass: the impact efficiency is preserved, while sound level and air consumption drop dramatically.

Page 3

### PLANT CLEANING PRODUCTS

Pharmaceutical, chemical and food plants require high level of cleanliness to be kept at all times and to assure production control more and more strict norms are required for quality procedures. In addition to our wide range of tankwashers for the inside cleaning of tanks and vats, we offer a line of products designed for cleaning operations to provide plants with an efficient service in a clean and orderly appearance. These include professional cleaning guns and high quality stainless steel hose reels.

Page 5

### MIXING EDUCTORS

A water eductor can sometimes be a simple solution to a variety of problems. We offer a line of eductors for several applications like producing hot cleaning water from an existing steam line, heating liquids in reservoirs by means of steam, keeping chemical solutions or paints properly mixed inside their vats and emptying tanks with a high pressure jet of water where a submersible pump is not available. Producing hot water under pressure from a steam line with a static device not requiring electric motors is a very useful solution for those applications where a tank needs to be washed in explosion-proof facilities.

Page 11

### LINE FILTERS

A plugged nozzle in a process plant can cause anything from an annoying maintenance problem to severe break downs. Protecting your spraying system by means of an adequately selected filter or filtering system should always be considered while your production process is being designed. We show in this catalogue section a range of small and medium size line filters. Large industrial filters and by-pass filtering systems, specifically designed for a single application are also outlined. They can be supplied in different materials to suit the specific application on hand, if necessary a self cleaning system can be fitted.

Page 14

COMPLEMENTARY PRODUCTS

AIR BLOWING NOZZLES

UEA 0010

These air blowers are designed to direct a powerful air stream over a well defined area. Their carefully studied profile obtains a laminar pattern of air with very low turbulence, entraining the surrounding ambient air to increase the local impact of the air stream. Because of the low turbulence, loss of energy and sound wave emissions are kept very low. The blower is made out of lightweight electroless nickel plated aluminum or 316 L Stainless steel. The table shows the air capacities as a function of the air pressure, while the graph gives the noise level as a function of the front and side distances from the nozzle for an air pressure value of 2 bar.

Noise level diagram at 2 bar air pressure.

These air blowers meet the requirements of American OSHA regulations

Materials

- Body V7 Aluminum, electroless nickel plated
- B31 AISI 316 L Stainless steel

Code	RF inch	Air capacity (Ncm/h)					H mm	WS mm
------	---------	----------------------	--	--	--	--	------	-------

UEA 0010 xx	1/4	15	20	25	31	35	55	17
-------------	-----	----	----	----	----	----	----	----

Pressure (bar) — 2,0 — 3,0 — 4,0 — 5,0 — 6,0

UEA 0525

These air blowers have been designed for applications where a flat blade-shaped air stream, with specifically high impact is offered which for example cover a given width on a moving conveyor. Here again the outside profile obtains a strong entrainment action over the surrounding atmosphere, generating a high impact laminar air blade, and avoiding the highly turbulent conditions of a free air jet with consequent loss of energy and high noise.

Materials

- E31 Polyacetalic resin (POM) LT 80° C - LP 5 bar
- V7 Aluminum, electroless nickel plated LT 95° C - LP 15 bar

These air blowers meet the requirements of American OSHA regulations

Code	RG inch	Air capacity (Ncm/h)					H mm	L mm	L1 mm	L2 mm	WS mm
------	---------	----------------------	--	--	--	--	------	------	-------	-------	-------

Noise level diagram at 3 bar air pressure.

Noise level diagram at 6 bar air pressure.

COMPLEMENTARY PRODUCTS

UEB

AIR BLOWING NOZZLES

UEB blowers produce a laminar jet of compressed air, with high efficiency and limited noise level. Their unique design provides an air stream exiting from a protected position, and changing direction because of adhesion to a radiused profile due to the Coanda effect. Their design allows for remarkable advantages:

- The exit orifice is not exposed to the risk of being damaged by impact.
- The bar can be built on any desired length, up to 600 mm.

Materials

Body	V7	Electroless nickel plated aluminum
Upper Plate	A9	Nickel plated steel

The table shows air capacity as a function of air pressure, while the graphs below show the noise level as a function of the front and side distances from the nozzle, while operated at an air pressure of 2 bar. Since the air leaving the nozzle orifice drags along ambient air, the air blade produced by the nozzle (AIR OUT) has a larger flow rate which is a multiple of the feed air flow (AIR IN).

Code	RF inch	Air capacity (Ncm/min)										H mm	L mm	W kg
		AE	AU	AE	AU	AE	AU	AE	AU	AE	AU			
UEB 0150 V7	1/4	0,26	4,70	0,34	6,00	0,42	7,10	0,51	8,60	0,60	10,6	30	150	0,3
UEB 0300 V7		0,52	9,40	0,68	12,0	0,84	14,2	1,02	17,2	1,20	21,2		300	0,7
UEB 0450 V7		0,78	14,1	1,03	18,0	1,26	21,3	1,53	25,8	1,80	31,8		450	0,9
UEB 0600 V7		1,03	18,7	1,40	24,0	1,68	28,4	2,04	34,4	2,40	42,4		600	1,4

The air blade exiting through the side slot follows the radiused profile and leaves the body with an angle of 90° from the original direction, as shown by the drawing. This remarkable feature, based on the Coanda effect, makes it possible to have the air outlet orifice in a totally protected position, which is very interesting as for instance in those cases where products oscillating on a chain conveyor can damage conventional air blowers.

Noise level diagram at 2 bar air pressure.

SAFETY NORMS

Safety norms determine the maximum sound level to which employees can be exposed in their working place. The noise level diagrams supplied show the noise level measured for one blower as a function of the distance from the blower itself. UEB series blowers meet OSHA noise requirements. Should your system consist of more than one blower, we recommend that the resulting noise level is checked for compliance with the requirement of the health and safety regulations where applicable.

COMPLEMENTARY PRODUCTS

WATER GUNS

UMV

The UMV series washgun has been designed primarily to avoid hot water waste, while assuring very comfortable operation conditions. Its thick rubber casing not only effectively protects the operator's hand from the discomfort of hot water but also assures an excellent protection in case the washgun is dropped or falls to the ground since it avoids any damage to the tiles or the equipment. The careful design, mainly used for the food industry, also includes a grease and detergent resistant quality rubber, plus a blue colour has been chosen as a visual aid to be seen clearly against a white or clear foreground. The trigger is lined too, and can be held in the open position by means of a lock-ring. The spray pattern can be adjusted continuously between a closed straight jet to a wide angle spray, so that the proper spray pattern can be chosen for each individual job.

Materials

Body	T2	Brass casting, chrome plated
	B3	AISI 316 Stainless Steel
Lining	E0	EPDM
Stem	B3	AISI 316 Stainless steel
Trigger	B3	AISI 316 Stainless steel, rubber lined
Hose shank		13 mm – 1/2" hose fitting
Weight		0.9 kg
Max temperature	LT	95° C
Max pressure	LP	24 bar

UMV 2210 xx

The versatility of this washgun is enhanced from the additional model UMV 2211, which can be fitted with nozzles or different lances through its 1/2" female thread. The three different lance models shown are easily fitted to the gun body with a 1/2" male nipple and offer the following choices of operation:

- 1 Foaming machines and equipment prior to washing operations. The foam lance comes with a quick connect female coupling, and a matching coupling must be fitted at the gun outlet.
- 2 General purpose 1/4" fem thread outlet, 1/4" male thread inlet. Available both with heat protection sleeve, or zinc-plated steel. The general purpose lance needs a connection nipple 1/4" fem to 1/2" male to be fitted on the gun. Please see the complete washgun and components codes below.

Complete guns

UMV 2210 xx	Standard, adjustable jet
UMV 220A xx	With foam lance
UMV 220B xx	With 1/4" fem outlet, bare lance
UMV 220C xx	With 1/4" fem outlet, heat protected lance

Single components

UMV 2211 xx	With 1/2" female quick thread, without lance
XUM V001 B3	Foam lance
XUM V002 B3	Quick connect coupling for foam lance, 1/2" M
XUM V003 B3	Universal lance, 1/4" F out, heat protection
XUM V004 B3	Universal lance, 1/4" F out, zinc-plated steel
XUM V005 T2	Nipple, 1/4" F – 1/2" M, chrome plated brass

Please complete product codes, ending with (xx), filling in the code of required material eg T2, chrome plated brass, or B3 for AISI Stainless steel 316.

UMV 2211 xx	+	XUM V002 B3	+	XUM V001 B3	=	UMV 220A T2

XUM VQM3 B3 XUM VQF6 B3

## HOSE STAND

This keeps the gun hose away from the ground and maintains better hygienic conditions. Two 8,5 mm holes on the back plate make it possible to fix it on any wall.

Material B2 AISI 316 Stainless steel

XUM US10 B2

## UMS

UMS 0037 E3

UMS 0038 E3

## FLEXIBLE HOSE

This hose has been selected for use with all types of UMV hot water guns, since it is made with top quality EPDM to resist high temperatures, and assuring long service life without wear. Inlet and outlet ends are fitted with female quick coupling which can be supplied either with 1/2" or 3/4" size .

Maximum operation pressure LP 8 bar  
Maximum operation temperature LT 160° C

Materials Hose E0 EPDM  
Couplings B3 AISI 316 Stainless steel

Code	Size inch	LF m
XUM VT25 E0	1/2	25
XUM VT20 E0	3/4	20

## QUICK COUPLINGS

Supplied as standard together with XUM P- hoses, can be ordered separately with the following codes:

Material B3 AISI 316 Stainless steel

Code	Quick coupling tipo	Thread inch	Diameter mm
XUM VQF1 B3	Female	1/2 M	
XUM VQF2 B3	Female	1/2 F	
XUM VQF3 B3	Female	3/4 M	
XUM VQF4 B3	Female	3/4 F	
XUM VQF5 B3*	Female		13
XUM VQF6 B3*	Female		19
XUM VQM1 B3	Male	1/2 M	
XUM VQM2 B3	Male	1/2 F	
XUM VQM3 B3	Male	3/4 M	
XUM VQM4 B3	Male	3/4 F	

\* These couplings have a hose shank with the shown dia size.

For washing or wetting small surfaces, this gun offers the convenience of sturdy internal parts in stainless steel, covered by a plastic shell for optimum shock resistance. The gun has a 1/2" female outlet thread so a chosen nozzle can be mounted. Alternatively it can be fitted with a short plastic lance designed to house our range of nozzle tips, either full cone BX series or flat jet GX series, secured by means of a retaining nut.

Maximum operation pressure LP 40 bar  
Maximum operation temperature LT 80° C  
Maximum capacity LQ 80 lpm  
Weight W 0.17/0.25 Kg  
Inlet thread RF 1/2" F BSP

Materials Inner parts B1 AISI 303 Stainless steel  
Inside seal E7 Viton  
Outside shell E3 Acetalic resin

## COMPLEMENTARY PRODUCTS

## HIGH PRESSURE GUNS

UMW

A range of high pressure washing guns and lances have been fully tested for many years of satisfactory use. The sturdy construction, the carefully designed outer shell providing protection for operator's hands from high temperatures, and offers the possibility to lock the trigger in place for continuous service making these professional products well accepted for every market.

## Materials

Body	D4	Nylon, Glassfibers reinforced
Inside parts	B1	AISI 303 Stainless steel
	C3	AISI 440 Stainless steel, hardened
	T1	Brass

UMW 0006 D4 gun offers a quick connection on the gun outlet for easy disassembling and replacing of the extension lances.

Nominal pressure		200 bar

## HOSE REELS

These high quality hose reels have been especially designed for those applications where stringent hygiene conditions need to be kept at all times, like pharmaceutical, chemical, cosmetic and food industries. The flexible hose can be maintained in a safe and proper place where dirt cannot collect. Entirely manufactured in polished stainless steel to avoid corrosion and rust. Their polished surface resists the build up of dust and dirt and should never be affected by corrosion or rust. Hose reels can be located on a wall or on a trolley for mobile operation.

**Material** B2 AISI 304 Stainless steel

## PRODUCT CODES

We offer on the following pages a complete range of reels and high quality food grade flexible hoses, designed for low and high pressure operation.

Every hose reel has a given internal housing, so the maximum hose length which can be housed depends by the hose size. For this reason hose reel codes do not include any hose, it must be ordered separately by the customer: hoses and reels will be delivered assembled.

In the table for each reel type, MF shows the suitable hose size/sizes whereas LF states the hose length possible for each given hose size.

The table at page 10 shows the ordering code per meter length of each hose type.

## UMU A/B

## MANUAL REWIND REELS

UMU A/B basic type of hose reel, with manual rewinding, fits perfectly the need for light cleaning operation or for assembly onto a mobile cleaning cart for operations on different places.

Swivel base and custom designed carts can be quoted on request.

## COMPLEMENTARY PRODUCTS

## HOSE REELS - AUTO REWIND

UMU G/H, spring powered hose reels, are very useful in those applications where frequent cleaning operations are performed, saving time and increasing the operator efficiency. The hose can be easily pulled out of the reel for the required length, and will maintain its position without any effort from the operator while washing is taking place: a further short pull will cause the hose to rewind onto the reel. A swivel base can be supplied to each reel in this model range, see table for the right swivel.

## AUTO REWIND &amp; ORIENTABLE OUTLET

UMU L/K reels offer, in addition to all the characteristics of the UMU G/H auto-rewind types, the convenience of an adjustable wall swivel device. This feature allows the operator to orientate the reel in an ideal working position.

It is then possible to pull the hose in any given direction, which increases the ease of operation and the flexibility of the installation.

## XUM

## FLEXIBLE HOSES

To complement our line of reels we make available the following range of flexible hoses, with different temperature and pressure operation ratings.

All hoses are made out of food grade NBR resistant to animal and vegetable greases, and offering a high gloss outside surface to avoid adhesion from dirt and any foreign particle.

*Please note that codes below refer to 1 meter length*

Order example:

The selected reel is UMU JE30 B2LSB, the first shown in the above table, and 14 meters of a 3/4" hose designed to withstand a pressure of 20 bar are requested.

COMPLEMENTARY PRODUCTS

MIXING EDUCTORS

UPB

These eductors are the ideal devices for the continuous blending of liquids or solutions contained in tanks, when settling of heavier components and local variations of density must be avoided.

Stainless steel types are often used for steam heating processes in water tanks. The distinctive design incorporates the efficiency of the Venturi profile into a body with high structural strength, where the eductor is cast or moulded offering sturdy thick sections. This minimizes the danger of the eductor being damaged in the course of maintenance work.

Maximum operating temperature LT 80 °C (PP)

G = Straight (BSP)

The table above shows the eductor water capacity as a function of the pressure drop between the inlet pressure and the outlet back pressure.

See the diagram beside for steam heating, full lines show Heat Quantity, broken lines Steam Capacity, as a function of feed pressure.

The graph on the left shows the effective range of type UPB D100, as tested in a water tank at 50 cm depth.

Under normal working conditions, for feed pressure values between 2 and 4 Bar, eductors with a total capacity equal to 20% of the liquid volume to be agitated has proven adequate for most applications.

Detailed suggestions about eductor layouts inside tanks are shown in product Data Sheet.

MIXING EDUCTORS

UPD

UPD series eductors are similar to the UPB series, the only difference is that they are supplied with a female thread connection.

This design offers the advantage of an easier removal from the feed pipe, should the eductor be broken while the plant is serviced.

COMPLEMENTARY PRODUCTS

UPL

SMALL STEAM HEATERS

UPL steam operated water heaters offer a simple, cheap and noiseless solution to the problem of producing hot water in factories. Simply connecting the mixer inlet to cold water and steam lines assures a ready supply of hot sanitary water for your cleaning processes. All the steam energy is given to the water, the heating processes is extremely efficient and assures a low cost per liter and no stock is needed: just make the quantity you need. Two inlet valves allow for adjusting the temperature value, that can be read on the thermometer in front of the mixer. A safety valve automatically closes the steam inlet in event of water supply absence. Please read User Manual enclosed in the box before operating the units.

Max operation temperature LT 90° C  
 Max steam pressure LP 10 bar  
 Material B3 AISI 316 Stainless steel

COMPLEMENTARY PRODUCTS

PUMP EJECTORS

UPM

UPM pump ejectors are static pumps with no moving parts, using the kinetic energy of a high pressure motive fluid (steam or water) to entrain a liquid, mix the two and discharge the mixture against a back pressure. Typical applications:

- Draining flooded areas.
- Emptying tanks and sumps
- Proportioning operations

LARGE STEAM HEATERS

UPN

UPN steam jet liquid heater is a device designed to heat considerable volumes of liquid contained in large tanks and without creating noise and vibration and wherever dilution by condensate is allowed. Continuous and efficient heating of liquids is performed through steam condensing, with the additional advantage of the mixing action that assures uniform heating over the entire tank volume.

## COMPLEMENTARY PRODUCTS

### VEH

### PLASTIC BODY FILTERS

The line filters of the VEH series, are a rational and economical solution for such applications where severe operating conditions are not to be expected. Entirely made out of polypropylene, with two brass bushings (1/4" female thread), for wall mounting. The threaded coupling between the bowl and the head allows for quick cleaning or replacement of the filter cartridge without the need of any tool.

Max operation pressure LP 14 bar.

Materials Body D21 Moulded Polypropylene  
Seal E0 EPDM

Different cartridge colors are used to identify available filter gauge, the last column on the right shows mesh dimensions according to American mesh size.

Our cartridge code includes the mesh size, which does not need to be specified.

### VEL

### BRASS BODY FILTERS

VEL type filters are the ideal solution for small systems where ease of cleaning is required. When necessary, simply open the valve at the bottom of the filter and the dirt contained inside the cartridge is easily expelled. The disassembly of the filter bowl is to be foreseen only to wash the cartridge loose of larger dirt particles. A manometer on the filter head shows the outlet pressure, hence pressure drop through the filter. The filter cartridge is only available with a 80 mesh net.

Max operation pressure LP 16 bar  
Max operating temperature LT 100 °C.

## COMPLEMENTARY PRODUCTS

## LARGE CAPACITY FILTERS

VEM

VEM FILTERS have been designed for high efficiency and ease of maintenance under hard conditions. The bowl houses large size cartridges, to extend periods of operation and reduce maintenance time, and has a thread connection to the body for quick removal without the aid of tools. Finally, a plug at the bottom of the bowl allows for fitting a ball valve to bleed the filter.

## ASSEMBLY ACCESSORIES

### NIPPLES, LOCKNUTS AND INTERNAL FILTERS

We offer a range of nipples and locknuts to suit most customers requirements and in different materials. Made out of high quality materials and under stringent tolerances, they assure a precise and reliable assembly for the nozzles in your system. Small size filters assure individual protection against clogging for single low capacity nozzles.

Page 17

### PIPE CLAMPS

The most extensive range of nozzle clamps engineered for industrial applications to give your own system a modern and efficient design, with the added advantage of easy and precise fitting. Our products will assist in keeping a plant clean and well maintained at peak performance and for sustainable period of time. Three series of swivels with a wide range of sizes that allow correct connection and quick orientation of the nozzles in your system, improving its performances. Swivel joints available in brass and several stainless steel qualities.

Page 21

### SURFACE TREATMENT PRODUCTS

The widest range available for products specifically designed for pretreatment tunnels. Since the ZPF model has been introduced in 1982, PNR continues to supply the most modern products to major equipment manufacturers in the world, and to revolutionize the design of modern surface pre-treatment plants. The latest innovation in this field is a tongue nozzle with a patented quick-coupling that fits existing sphere equipped clamps, its 60° spray angle improves the efficiency of your system increasing the impact force of the spray.

Page 25

### CUSTOM MADE FILTERS

Large size filters designed to suit specific industrial needs, made out of carbon steel, plastic materials, stainless steel or any other material or alloy required by your process. A complete range of filtering elements with different styles and made out of various materials. Painting or coating cycles based on the operation environment. Everything required to offer an accurate and reliable filtering service.

Page 30

## ASSEMBLY ACCESSORIES

## NIPPLES

ZAA welding nipples allow the assembly of GX, BX or KX series nozzle tips onto pipes and spray manifolds. The 3/8" nipple accepts filters of the series VEA, VEC, VED for protection of single nozzle tips. Welding nipples can be supplied radiused for the welding connection, the radius values are listed as RA in the code table.

Code	RG inch	H mm	H1 mm	D mm	DX mm	RA mm	W g
------	------------	---------	----------	---------	----------	----------	--------

## Standard

ZAA 1738 xx	3/8	18	10	17	11,5	-	20

## ASSEMBLY ACCESSORIES

## VAA

VAA 0038 D6

## LOCKNUTS

VAA locknuts have been designed for assembly onto our Z series nipples. They are available from stock in brass and stainless steel, and can be delivered on request out of any machineable material. A top quality polypropylene retaining nut, highly resistant to water absorption, is available to fit 3/8" nipple and ZPB clamp outlets.

Materials	B1	AISI 303 Stainless steel
	B3	AISI 316 Stainless steel
	D6	PP, chemically bonded fiberglass
	T1	Brass

Code	RF inch	D mm	H mm	WS mm

VAA 0125 xx	1 1/4	32,5	27	50

## VAB

VAB 0125 D6B

## LOCKNUTS

VAB 0125 D6B locknut has been designed for use on ZPF, ZPL, ZPN and ZPQ type pipe clamps. Its special thread and the outside shape allow to easily assemble the cap by hand, without the use of any tools, making maintenance operations easier and faster. The high quality plastic material has a very low water absorption, a high dimensional stability under temperature and high tensile strength, so as to avoid any risk of the cap coming loose even under vibrations.

Max working temperature LT 80° C.

Material D6 PP, chemically bonded fiberglass

## VAE

## LOCKNUTS

VAE blind cap has been designed for the purpose of blanking off the ends of spray manifolds, in surface pre-treatment plants. It is moulded with the same high quality thermoplastic material as used for all products in the surface pre-treatment product line.

Max working temperature LT 80° C

Material D6 PP, chemically bonded fiberglass

Code	RF inch	H mm	WS mm
VAE 0100 D6	1	25	42
VAE 0125 D6	1 1/4	32	52
VAE 0150 D6	1 1/2	32	60

## ASSEMBLY ACCESSORIES

## INTERNAL FILTERS

## VE

VE filters provide an individual protection for each single nozzle tip. We recommend the use of individual filters on low capacity nozzles and nozzle tips, where outlet orifices and internal passages have limited dimensions and plugging is therefore likely to happen. These should be used in addition to a main filter on the supply line of the system. For an efficient protection, it is recommended to select a mesh size with a free-passage dimension smaller than the 70% of the free-passage dimension of the nozzle orifice.

## VEA

These filters can be assembled into all 3/8" nipple outlets and also into ZPB series clamps. Three different mesh dimensions are available, as shown in the table at the bottom of the page.

Materials	Collar	T3	Copper
	Wire net	B3	AISI 316 Stainless steel

VEA

## VEC

Used with nozzle tips, VEC type filters offer a large cartridge surface area as compared to the orifice cross section, and assure a long service time before maintenance is required. These filters can be assembled into all 3/8" nipple outlets and into ZPB series clamps.

Materials	Body	B1	AISI 303 Stainless steel
		B3	AISI 316 stainless steel
		T1	Brass
	Wire net	B2	AISI 304 Stainless Steel

VEC

## VEF

Threaded filters can be used with low-flow flat-jet 1/4" JB, HB series. Thread made to 3/8" UNF standard

Materials	Body	B1	AISI 303 Stainless steel
		B3	AISI 316 stainless steel

## ASSEMBLY ACCESSORIES

## PIPE CLAMPS

## ZPB

ZPB series clamps allow nozzles to be assembled on manifolds in an easy, fast and professional way. Only one hole is required, no threading or welding, and a 3/8" male nipple is readily available for nozzle connection. The quality of polypropylene used for construction of our ZPB clamps offers good tensile strength at high temperatures, and low values of water absorption, assuring a secure assembly when in operation. A retaining nut moulded with the same material fits the nipple of all ZPB clamps.

Max working pressure LP 8 bar  
Max working temperature LT 80° C.

## ASSEMBLY ACCESSORIES

## FILTERPRESS CLAMPS

## ZPH

ZPH clamps have been specially designed to allow mounting the clog resistant flat jet disc nozzles of the series GE in a fast and economical way. GE nozzles are the best solution for washing band filter cloths used in mud drying filter presses. The clamp design lets the back part of the nozzle protrude inside the pipe, in order to enable the cleaning of the orifice by means of a rotating stainless steel brush.

Max working temperature	LT 80° C
Max working pressure	LP 7 bar
Fitting dimensions	
Outer pipe diameter	50 mm
Inner pipe diameter	47 mm
Feed hole	19 mm

Materials	Clamp	D6	PP, chemically bonded fiberglass
	Pin, bolt	B3	AISI 316 stainless steel

Code	PD mm	D mm	H mm	H1 mm	L1 mm
ZPH 0150 D6	50	19	70	34	91

## SWIVEL JOINTS

## ZRA

ZRA swivel joints fit a wide range of nozzles, while maintaining a rational piping lay-out. Fitting and adjustment are easily performed by tightening the hexagonal screw cap. A female thread accepts the nozzle, and a male threaded connection fits onto the feed line.

Max working pressure	LP	9 bar
Materials	B3	AISI 316 Stainless steel
	T1	Brass

## ZRB/ZRC

This swivel joint type can also be supplied with a female pipe connection (code ZRB) or a weld on connection (code ZRC), with the same range shown in the ZRA table beside.

Data Sheet for ZRB and ZRC types available on request.

Code	RG poll	RF poll	L mm	A deg	WS mm	W g
ZRA 1212 xx SB	1/8	1/8	38	50	22	57
ZRA 2525 xx SB	1/4	1/4	57			75
ZRA 2626 xx SB	1/4	1/4	67	60	27	147
ZRA 3826 xx SB	3/8	1/4	67			150
ZRA 3838 xx SB	3/8	3/8	70			155
ZRA 5050 xx SB	1/2	1/2	74	40	27	186
ZRA 7575 xx SB	3/4	3/4	92		40	468

## ASSEMBLY ACCESSORIES

## ZRP

## SWIVEL JOINTS

ZRP swivel joints are a very popular type, where adjustment is carried out by locking the sphere between the two flanges. A female thread accepts the nozzle, and a male threaded connection fits onto the feed line.

Materials B2 AISI 304 stainless steel  
T1 Brass

Code	RG inch	RF inch	L mm	B mm	L1 mm	A deg	W g
ZRP 1212 xx	1/8	1/8	30	40	35	50	65
ZRP 2512 xx	1/4	1/8	32				92
ZRP 2525 xx	1/4	1/4	40	50	45	60	140
ZRP 2538 xx	1/4	3/8	40				150
ZRP 3825 xx	3/8	1/4	40				150
ZRP 3838 xx	3/8	3/8	40				150

## ZRQ

## SWIVEL JOINTS

ZRQ swivel joints are designed to allow jet orientation for large nozzles. Fitting and adjustment are carried out by locking the clamping flange. These joints have a male thread connection to the feed pipe, a male or female connection for the nozzle.

Materials B3 AISI 316 Stainless steel  
T1 Brass

Code	RG inch	RG1 inch	RF inch	L mm	D mm	A deg	W kg
ZRQ 8080 xx	1		1	89	92	40	1,8
ZRQ 8282 xx	1 1/4		1 1/4	130			2,1

ZRR 8686 xx	2	2 1/2		203	158	40	8,0
ZRR 8888 xx	2 1/2	2 1/2		229			8,8

## ASSEMBLY ACCESSORIES

## SWIVEL NOZZLE CLAMPS

## ZPF

ZPF clamps, first introduced by PNR, have revolutioned the design of modern surface pre-treatment plants. They combine the convenience of nozzle orientation and the easiness of rapid mounting. It is possible to fit a broad range of nozzles with jets correctly oriented by just drilling one hole without welding a nipple to the manifold, and fixing the clamp with one screw. Checking and replacing of the nozzles is quick, and easily performed without the need of tools. ZPF can be fitted with swivel body moulded nozzles, or with female threaded spheres to accept any metal nozzle with threads between 1/8" and 1/2". For added strength, 1 1/2" clamps have a stainless steel threaded captive nut moulded into the body.

Maximum operating temperature LT 80° C

Maximum operating pressure LP 3 bar

Materials Body D6 PP, chemically bonded fibreglass  
Pin & bolt B3 AISI 316 Stainless steel  
O-ring E8 NBR

Code	PS inch	PD mm	D mm	H mm	H1 mm	L mm	A deg	W g
ZPF A125 D6	1 1/4	41/43	20,0	83	54	84	40	85

ZPF C125 D6			14,0					
ZPF A150 D6	1 1/2	46/49	20,0	90	57	90	40	88
ZPF B150 D6			17,0					
ZPF C150 D6			14,0					

## PIPE CONNECTION

ZPF clamps are available with three different nipple sizes (D1) with diameters of 14.3, 17.0 and 20 mm. Single product codes are shown in the table beside.

## CAM &amp; LEVER CLAMPS

## ZPQ

ZPQ clamps are the most modern product developed for application in surface treatment plants: they reduce significantly the time and labour required for maintenance disassembling and cleaning operations. A patented cam and lever system quickly fits the clamp onto the pipe without tools. The clamp design, where body cam and lever are linked by stainless steel pins, avoids any risk of losing single parts during assembly and disassembly. To avoid any leakage and consequent dirt buildup on the swivel ball, a unique soft seal is provided on the ball seat. ZPQ clamps use the same retaining nut and sphere nozzles as the other PNR clamps.

Max working pressure LP 4 bar (tested at 20° C)

Max working temperature LT 70° C

Materials Plastic parts D6 PP, chemically bonded fibreglass  
Pins B3 AISI 316 Stainless Steel  
O-ring E0 NBR  
Seal D22 Soft polypropylene

Code	PS inch	PD mm	D mm	H mm	H1 mm	L mm	W g
ZPQ A125 D6	1 1/4	42/43	20,0	95	55	84	87
ZPQ B125 D6			17,0				
ZPQ A150 D6	1 1/2	48/49	20,0	100	55	95	97
ZPQ B150 D6			17,0				

*As easy as 1, 2, 3...just wrap the clamp around the pipe and lock the lever...you're done !*

## ASSEMBLY ACCESSORIES

## HG

## SWIVEL NOZZLES

This range of moulded nozzles with spherical connection is designed to fit ZPF, ZPO and ZPL/N clamps with flat jet and hollow cone spray patterns available. A wider range of catalogue listed stainless steel nozzles can be assembled by means of the several moulded ZBA spheres with female threads shown below.

## FLAT JET NOZZLES

A wide range of flow rates, from 3.3 to 37.5 lpm @ 2 bar ,together with a 60° spray angle make HGQ series nozzles the most preferred choice in pre-treatment plants: other spray angles are available to match the design of your plant, please request information on existing types. HGQ nozzles are available either moulded out of high quality polypropylene or with a stainless steel insert assembled into a polypropylene nozzle holder.

Materials B31 AISI 316 L Stainless steel insert  
D5 Powder-filled polypropylene

Code	Flow rate (lpm)					Color	W g

## QUICK-FIT SPOON NOZZLES

A range of high impact moulded spoon nozzles is now available for assembly on all our pre-treatment nozzle clamps. The nozzles are connected to the standard sphere by means of a new PNR quick-fit design. The new design offers the ideal combination for a pre-treatment nozzle, with a 60° spray angle and the highest possible impact for a given feed pressure. Please ask for a Data Sheet on this new product.

## HOLLOW CONE NOZZLES

High flow rates and little risk of clogging is provided by large free-passage X-vanes which make these nozzles the perfect choice for rinsing and treatment processes. A 50° spray angle offers high impact values at considerable distances, even from low feed pressures. Totally moulded out of high quality polypropylene, assuring low liquid absorption and resistance to high temperature.

Material D5 Powder filled Polypropylene

Code	Flow rate (lpm)					Color	W g

ASSEMBLY ACCESSORIES

THREADED SPHERES

HG

ZBA series spheres are designed to accept male threaded metal nozzles and provide a very versatile nozzle combination system. Different nozzle types, and nozzles of differing materials, flow rates and spray angles can then be fitted into the whole clamp range that accept these threaded spheres. Threads are according to European (BSP) and American (NPT) norms. The next table shows available connections and includes the blind sphere ZBA 0000 D5.

Code	RF BSP inch	RF NPT inch
ZBA A025 D5	1/4	
ZBA B025 D5		1/4
ZBA A038 D5	3/8	
ZBA B038 D5		3/8
ZBA A050 D5	1/2	
ZBA 0000 D5	cieca	cieca

PIPE HOLDERS

ZPG

ZPG type pipe holders offer an easy and convenient solution for holding spray manifolds to the tunnel wall in surface treatment plants, while making maintenance operation faster. The high quality springs accommodate both steel and plastic pipes, with sizes ranging from 3/4" to 1 1/2". Manufactured out of a special grade stainless steel, these springs are heat treated and will not lose their elastic properties even after being disassembled several times. Each ZPG holder can be equipped with two springs, for use with heavy manifolds or with pipes that are subjected to excessive vibrations. The table below shows the product codes for one and two springs holders.

Materials Body D6 PP, chemically bonded fiberglass  
Springs N1 AISI 302 Stainless steel, heat treated

Code	PS	D	H	L	WS	W	
Single spring	Double spring	inch	mm	mm	mm	g	
ZPG 1075 D6	ZPG 2075 D6	3/4	11	53	50	17	72
ZPG 1100 D6	ZPG 2100 D6	1					72
ZPG 1125 D6	ZPG 2125 D6	1 1/4					90
-	ZPG 2150 D6	1 1/2					90
-	ZPG 2200 D6	2					110

Weight values are based on the double spring version

The drawing shows the distances of the pipe center axis from the wall, for different pipe sizes assembled into the pipe holder.

ZPG body design has provision for being secured to the wall by means of one M10 bolt with hexagonal 17 mm head

## ASSEMBLY ACCESSORIES

## ZPL

ZPL

## SPRING PIPE CLAMPS

ZPL clamps are an efficient and price conscious solution for fitting nozzles into light duty plants. They use the same range of accessories (retaining caps, nozzle spheres, threaded spheres and o-rings) as the ZPF clamps, which allows for maximum flexibility in system design while reducing stock to a minimum. The clamp is fitted onto the pipe quickly and without any tools locking the profiled spring around the pipe, minimizing the time required when installing or servicing the plant.

Max working pressure LP 2 bar  
 Max working temperature LT 80° C  
 Locknut Code VAB 0125 D6

Materials Body D6 PP, chemically bonded fibreglass  
 Spring N1 Aisi 302 Stainless steel, heat treated

ZPN

## ZPN

For larger manifold sizes and when standpipes are subjected to excessive vibrations, we recommend using the double spring ZPN type clamp assuring a firmer connection on the pipe. Products code are listed in the table beside.

Code		PS	PD	D
Single spring	Double spring	inch	mm	mm
ZPL C100 D6	ZPN C100 D6	1	34/32	14,0

## ASSEMBLY ACCESSORIES

## QUICK COUPLING JOINTS

## ZSA

ZSA quick coupling joints are a very popular solution for connecting standpipes to manifolds in surface treatment plants. There are inherent advantages for ease of operation and quick location facility. PNR couplings have been designed with industries requirements in mind, they offer sturdy bodies and high quality materials carefully chosen to withstand mechanical stress and chemical attacks. Standard types come with sintered 316 stainless steel levers and synthetic rubber seal. PVDF levers and Viton seals are available as an option.

Code	RF1 inch	RF inch	H mm	LP bar	W kg

\* Weight values for different materials are given on request

NOTE: ZSA quick couplers are available in a wide range of different assemblies, including types with fixed orientation, levers in special materials and other variations. A product data-sheet is available for further information.

## QUICK FITTING RISERS AND HEADER MANIFOLDS

Our range of products for surface pre-treatment plants is the most complete on the market and has been developed in collaboration with the most important system manufacturers on a worldwide basis. As requested by our customers, PNR has designed most of the assembly accessories commonly adopted today in pre-treatment plants. Thanks to our remarkable experience many of the most advanced plants have been equipped with a range of high quality products which is beyond comparison thanks to their rational and efficient design. All necessary parts for the professional assembly of risers and pipe manifolds are made available to our customers as shown on the diagram, and readily shipped from stock at competitive prices.

## COMPLEMENTARY PRODUCTS

### CUSTOM MADE FILTERS

We make available to the industry medium and large size filters designed according to our customers requirements for several applications principally in the chemical, pharmaceutical and food industry and wherever it is necessary to safely treat large volumes of fluid. Our scope of supply includes the filter design according to the most important norms like PED and ASME, the manufacturing and the final on site commissioning.

### MULTIPLE CARTRIDGE FILTERS

All our filters are normally manufactured out of AISI 316L stainless steel for chemical compatibility with most fluids, with a very robust design for operating under severe conditions and undergoing frequent cleaning cycles with no wear. The cover is fitted with swivel clamps and an o-ring is used to create a watertight seal.

All parts, including the filter support legs, are electro polished to avoid corrosion.

Maximum operation pressure	LP 20 bar
Inlet and outlet ports size	1 1/2" and 2" inches normally BSP male thread
Upper relief plug/valve	3/8" BSP female

Multiple cartridge filters are recommended for fluids having a vapor tension lower than 0.5 barg, at the highest temperature allowed. CE marking and Declaration of Conformity not required, for these devices article 3, para 3 of PED Regulation 97/23/CE applies.

### BAG FILTERS

All our filters are normally manufactured out of AISI 316L stainless steel for chemical compatibility with most fluids, with a very robust design for operating under severe conditions and undergoing frequent cleaning cycles with no wear. The cover is fitted with swivel clamps and an o-ring is used to create a watertight seal.

All parts, including the filter support legs, are electro polished to avoid corrosion.

Maximum operation pressure	LP 20 bar
Bag size range	1, 2, 3, 4
Inlet and outlet ports size	1" - 1 1/2" and 2" inches normally BSP male thread
Dimensione sfiato superiore	3/8" BSP female

Bag filters are recommended for fluids having a vapor tension lower than 0.5 barg, at the highest temperature allowed. CE marking and Declaration of Conformity not required, for these devices article 3, para 3 of PED Regulation 97/23/CE applies.

## COMPLEMENTARY PRODUCTS

### CUSTOM MADE FILTERS

#### BASKET FILTERS

All our filters are normally manufactured out of AISI 316L stainless steel for chemical compatibility with most fluids, with a very robust design for operating under severe conditions and undergoing frequent cleaning cycles with no wear. The cover is fitted with swivel clamps and an o-ring is used to create a watertight seal. All parts, including the filter support legs, are electro polished to avoid corrosion.

Maximum operation pressure	LP 20 bar
Standard basket	Designed for pressure drop 4 bar Special designs on request
Inlet and outlet ports size	1" - 1½" and 2" inches normally BSP male thread
Upper relief plug/valve	3/8" BSP female

Basket filters are recommended for fluids having a vapor tension lower than 0.5 barg, at the highest temperature allowed. CE marking and Declaration of Conformity not required, for these devices article 3, para 3 of PED Regulation 97/23/CE applies.

#### SPECIAL DESIGN FILTERS

With the range of filtering elements and materials available and our experience in designing and manufacturing sophisticated parts, we can quote and produce rational solutions for virtually all filtration problems. Each special construction is defined after careful examination of a customer's data and requirements. They are designed according to applicable international norms for pressure vessels, and final manufacture is done after approval of the customer drawings. Finally we commission our filters on site and issue a Commissioning Report.

### PRODUCT WARRANTY

PNR products will be replaced or repaired at the option of PNR and free of charge if defective in manufacture, labeling or packaging. The above warranty conditions will apply if notice of defect is received by PNR within 30 days from date of product installation or one year from date of shipment. The cost of above said replacement or repair shall be the final solution for any breach of any warranty, and PNR shall not be held liable for any damages due to personal injuries or commercial losses caused by product malfunction.

### OTHER PRODUCT RETURNS

Receiving returned products not precisely identified can originate delays in handling the single cases and even some product losses. In order to avoid such problems please follow the PNR procedures as described below.

#### PRODUCTS DELIVERED ERRONEOUSLY BY PNR

- 1 Obtain from PNR a RIN ( Return ident number) and a 3DA A04 Form.
- 2 Return products to PNR including the 3DA A04 Form properly filled including RIN number.
- 3 PNR shall issue a Credit Note payable to you including product and all transport cost.

#### PRODUCTS ORDERED ERRONEOUSLY TO PNR

- 1 Returned products will only be accepted if in new original condition and properly packed.
- 2 Obtain from PNR a RIN ( Return ident number) and a 3DA A04 Form.
- 3 Return products to PNR including the 3DA A04 Form properly filled including RIN number.
- 4 A 10% inspection and re-stocking charge and all transport cost are at charge of Customer.
- 5 A Credit note for the proper amount shall be issued and paid.

#### SPECIAL NON CATALOG PRODUCTS

The return of these products is only possible after PNR has issued an offer for purchase.

### DISCLAIMER

Our products are manufactured with the best care and according to the latest developments of the technology, but we cannot assure that every one of our products is perfectly fit for any possible specific process.

The information provided in this Catalog is provided "as it is" and we make no warranty of any kind with respect to the subject matter or accuracy of the information contained herein. This publication may include technical inaccuracies or typographical errors and changes may be periodically made to the information herein without previous notice.
